

The **legal\_dataset.json** dataset, titled "**Real Indian Legal Judgments**" (Version 1.0), is a structured collection of 200 real-world Indian Supreme Court and High Court judgments designed for NLP training.

## Dataset Metadata

- **Dataset Name:** Real Indian Legal Judgments
- **Version:** 1.0
- **Created Date:** 2025-12-21
- **Total Documents:** 200
- **Description:** Real-world Indian Supreme Court and High Court judgments for NLP training.

---

## Structure and Schema

The dataset is organized as a JSON object containing a list of documents. Each document follows a specific schema to capture both the raw legal text and structured analysis.

### 1. Document-Level Metadata

Each entry is identified by a unique ID:

- **doc\_id:** Unique identifier for the judgment (e.g., "DOC\_0001").

### 2. Judgment Details (judgment object)

This section provides structured bibliographic and legal data about the case:

- **case\_number:** The official legal citation or case identifier.
- **court:** The specific court that delivered the ruling (e.g., Supreme Court of India, Bombay High Court).
- **judge:** The name(s) of the presiding judge(s).
- **date:** The date the judgment was delivered.
- **case\_type:** The category of the case (e.g., Writ Petition, Criminal Revision Application).
- **legal\_provisions:** Key statutes, articles, or sections cited in the case (e.g., "Article 19(1)(a)", "Section 354-D IPC").
- **location:** The city or location where the judgment was delivered.
- **judgment\_text:** A point-by-point breakdown or the raw full text of the court's proceedings.
- **summary:** A concise paragraph explaining the core issues and the court's reasoning.
- **outcome:** The final verdict or disposal status (e.g., "Scheme Struck Down", "Conviction set aside", "Appeal Dismissed").

### 3. Question-Answer Pairs (qa\_pairs list)

Each document includes a series of questions and answers to facilitate machine learning tasks like Question Answering (QA):

- **question**: A natural language query about the case.
- **answer**: The corresponding answer derived from the judgment.
- **question\_type**: Categorization of the query, such as:
  - **factual**: Questions about names, dates, courts, and outcomes.
  - **reasoning**: Questions exploring the "why" and "how" of the court's legal interpretation.
