

Summarization Models

1. facebook/bart-large-cnn
Model Page: <https://huggingface.co/facebook/bart-large-cnn>
Proof: BART is a state-of-the-art **abstractive** summarizer and this checkpoint is fine-tuned on the CNN/DailyMail summarization benchmark, which is a standard dataset for news summarization. [\[huggingface\]](#)
2. google/pegasus-arxiv
Model Page: <https://huggingface.co/google/pegasus-arxiv>
Proof: PEGASUS introduces the Gap Sentence Generation pretraining objective specifically for summarization and reports superior ROUGE scores over standard sequence-to-sequence baselines across multiple benchmarks. [\[research\]](#)
3. google/long-t5-tglobal-base
Model Page: <https://huggingface.co/google/long-t5-tglobal-base>
Proof: LongT5 extends T5 with a global attention mechanism so it can process much longer input sequences than vanilla T5, making it suitable for long-document summarization as described in its official documentation. [\[learnopenvc\]](#)
4. nsi319/legal-led-base-16384
Model Page: <https://huggingface.co/nsi319/legal-led-base-16384>
Proof: LED (Longformer Encoder-Decoder) models fine-tuned on long-document summarization datasets, such as BillSum, achieve strong ROUGE scores for legal and legislative text summarization according to reported results on Billsum-style tasks. [\[ijeta\]](#)
5. t5-base / t5-large
Model Page: <https://huggingface.co/google-t5/t5-base>
Proof: T5 treats every NLP task, including summarization, as text-to-text and is competitive on standard summarization benchmarks, with studies showing T5 variants narrowing or closing the gap with BART and PEGASUS under some settings. [ieeexplore.ieee+1](#)

QA Models

1. deepset/roberta-base-squad2
Model Page: <https://huggingface.co/deepset/roberta-base-squad2>
Proof: RoBERTa-base fine-tuned on SQuAD2.0 is a widely used extractive QA baseline and achieves strong F1 and EM scores on SQuAD2-style benchmarks as

reported in multiple evaluations.[\[dataloop\]](#)

2. deepset/bert-large-uncased-whole-word-masking-squad2

Model Page:

<https://huggingface.co/deepset/bert-large-uncased-whole-word-masking-squad2>

Proof: BERT-large with whole-word masking fine-tuned on SQuAD2.0 is a classical strong baseline for extractive QA and appears in many comparative QA studies as a reference point.[\[dataloop\]](#)

3. nsi319/legal-bert-base-uncased

Model Page: <https://huggingface.co/nsi319/legal-bert-base-uncased>

Proof: Domain-adapted legal BERT models, as discussed in recent LawBench/LegalBench-style work, improve accuracy on legal information extraction and Q&A tasks compared to generic BERT models.[\[research\]](#)

4. google/flan-t5-base

Model Page: <https://huggingface.co/google/flan-t5-base>

Proof: FLAN-T5 is an instruction-tuned T5 variant trained on over 1.8K formatted tasks and consistently outperforms non-instruction-tuned T5 on held-in and held-out QA and reasoning benchmarks.[emergentmind+2](#)

5. microsoft/deberta-v3-base

Model Page: <https://huggingface.co/microsoft/deberta-v3-base>

Proof: DeBERTa-v3-base improves pretraining and attention disentanglement over BERT/RoBERTa, and reported SQuAD1.1/2.0 and MNLI scores show higher accuracy and F1 compared to earlier baselines, indicating better understanding and reasoning.[azure+1](#)
